HPE performed an analysis of transportation conditions surrounding the Convention Center of New Orleans. Our review focused on Complete Street issues such as walkability, vehicle speed management, and livable street quality. We reviewed potential improvements to the street network in the vicinity of the Convention Center and the Warehouse District. While we understand the need to consider trip diversion from the Convention Center Boulevard road diet, we viewed treatment of the surrounding street system as an integral part of the economic sustainability of both the convention center and surrounding commercial and residential activities. Optimal use of convention center property especially upriver from the bridge and the vitality of the Warehouse District were both considered strongly in our transportation evaluation. The multimodal center was central in providing convention center access for buses and taxis.
